

Automatic Project Setup

What it does and why it matters -- 19th Century Courtyards

What is this?

When you import this asset pack, a small Editor script runs automatically in the background. It configures your Unity project so the asset looks exactly as it was designed -- no manual settings required. A one-time dialog will appear asking for your confirmation before any changes are made.

Why does this exist?

Unity projects come with default settings that do not match the visual style of this pack. Without the setup script, the scene would open with the wrong color space, incorrect lighting intensity, broken material references, and grass that either does not appear or looks wrong. The script fixes all of this in a single click.

What it changes -- and why

Setting	What changes	Why it matters
Color Space	Set to Gamma	Gamma matches the artistic intent of all materials. Linear makes everything look washed out.
Render Pipeline	Assigns the included URP asset to all quality levels	Without it, materials appear pink. Every quality tier gets the correct renderer.
Lighting intensity	Disables linear light intensity	Keeps light colors consistent with how the scene was authored.
LOD Bias	Set to 2.0 on all quality levels	Prevents meshes from switching to low-detail versions too early near the camera.
Terrain detail	Detail distance 200m, full density	Restores the intended ground cover -- default Unity settings hide grass at close range.
Grass material	Restores correct shader and texture links	A Unity packaging limitation can break material references on import. The script repairs them.

What to expect

Shortly after import completes, a dialog box appears titled **19th Century Courtyards -- Project Setup**. Click **Apply** to confirm. The script runs once and will not appear again. To re-run it at any time, go to **Tools > EmacEArt > 19th Century Courtyards Setup**.

Can I undo these changes?

Yes. Every setting is a standard Unity Project Setting, adjustable at any time via **Edit > Project Settings**. No scene files or permanent assets are modified.
